                                                                                                                                                                                                               enhancing
                                                                                                                                                                                                       The present invention relates to methods and compositions for enhancing cardiac function in mammalian hearts by inserting transgenes encoding beta-adrenergic signalling proteins (beta-ABP) which increase beta-adrenergic responsiveness within the myocardium using in vivo gene therapy. The beta-ASPs of the invention include beta-adrenergic receptors (beta-AR), adenyly/cyclases (also referred as adenylcyclases (aRK) inhibitors and cAMP synthetase) and G-protein receptor kinase (GRK) inhibitors. The beta-ASP is used for enhancing cardiac function in mammalian hearts and for treating heart disease, especially congestive heart failure. The present COMA sequence encodes human partial cardiac adenylcyclase VI (ACVI) isoform which is used for generating a third beta-ASP transgene, used in the exemplification
                                                                                                                   Novel polynucleotide encoding a modified adenylylcyclase polypeptide useful for enhancing cardiac function in mammalian hearts, and for treating heart disease, especially congestive heart failure -
                                                                                                                                                                              Page 115-119; 153pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence encodes human adenylylcyclase isoform VI (AC-VI) from the present invention. The present invention describes a recombinant replication-defective viral particle (I) comprising a gene encoding a beta-adrenergic signalling protein (beta-ASP) operably linked to a promoter. Also described are: (1) a recombinant pro-viral plasmid (Is) comprising a gene encoding a beta-ASP, as above, operably linked to a promoter and further comprising a replication-defective viral genome: (2) a (mammalian) cell transfected with (I) or (Is): (3) an isolated polynucleotide comprising a sequence encoding a human adenylylcyclase isoform VI (AC-VI), or a variant having AC activity: (4) a human AC-VI encoded by (3): (5) an isolated polynucleotide

The present invention relates to methods and compositions for enhancin cardiac function in mammalian hearts by inserting transgenes encoding beta-adrenergic signalling proteins (beta-ASP) which increase beta-adrenergic responsiveness within the myocardium using in vivo gene therapy. The beta-ASPs of the invention include beta-adrenergic receptors (beta-AR), adenylytcyclases (also referred as adenylcyclase, adenylate cyclase and cAMP synthetase) and G-protein receptor kinase (GRK) inhibitors. The beta-ASP is used for enhancing cardiac function in mammalian hearts and for treating heart disease, especially congestive heart failure. The present DNA sequence encodes human cardiac adenylcyclase VI (ACVI) isoform which is used for generating a third beta-ASP transgene, used in the exemplification

Page 134-140; 153pp; English. 9: Claim

enhancing The present invention relates to methods and compositions for enhancing cardiac function in mammalian hearts by inserting transgenes encoding beta-adrenergic signalling proteins (beta-ASP) which increase beta-adrenergic responsiveness within the myocardium using in vivo gene therapy. The beta-ASPs of the invention include beta-adrenergic receptors (beta-AR), adenylytcyclases (also referend as adenylcyclase, denylate cyclase and cAMP synthetase) and G-protein receptor kinase (GRK) inhibitors. The beta-ASP is used for enhancing cardiac function in mammalian hearts and for treating heart disease, especially congestive heart failure. The present DNA sequence encodes human cardiac adenylcyclase VI (AVVI) isoform which is used for generating a fourth beta-ASP transgene, used in the exemplification the invention. of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This DNA sequence encodes human type VI adenylyl cyclase (hAC6, see AAW3059) that is expressed mainly in the heart and brain. hAC6 has a similar putative structure to other adenylyl cyclase isoforms but, like type V, is distinguishable in that it has a larger of view and a relatively shorter C-terminus as it lacks the C2b region. hAC6 cDNA was initially isolated from a human heart cDNA library using an adenylyl cyclase PCR fragment as probe. It was used to design primers that were used in a PCR-based RACE to obtain the full-length cDNA sequence. The invention relates to the hAC6 gene, methods for the recombinant production of purified hAC6 and the proteins made by these methods, antibodies against hAC6. Vectors, probes and host cells (especially HEK-293) transformed by genes encoding polypeptides having hAC6 activity, along with can be used as a tool to screen for agonists and antagonists that stimulate/Anhibit hAC6. Such compounds have therapeutic utility and integrating diseases caused by aberrant activity of this enzyme, and along when the companies and activity of this enzyme.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Newly isolated and purified human type VI adenylyl cyclase (hAC6) obygeptide - useful for identifying potential therapeutic agents that modulate hAC6 activity, and for the diagnosis of hAC6-associated diseases and disorders

The present invention relates to methods and compositions for enhancing cardiac function in mammallan hearts by inserting transgenes encoding beta-adrenergic signalling proteins (beta-ASP) which increase beta-adrenergic responsiveness within the myocardium using in vivo gene therapy. The beta-ASPs of the invention include beta-adrenergic receptors (beta-AR), adenylytcyclases (also referered as adenylcyclase, encoptors (beta-AR), and cAMP synthetase) and G-protein receptor kinase (GRK) inhibitors. The beta-ASP is used for enhancing cardiac function in mammalian hearts and for treating heart disease, especially congestive heart failure. The present CDNA sequence encodes human modified cardiac adenylcyclase VI (ACVI) isoform which is used for generating a beta-ASP transgene, used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           242

A canine heart CDNA library was constructed in lambda gt10 and was screened with a 970 bp AatI-HincII fragment from type I adenylyl cyclase cDNA probe (encodes the first cytoplasmic domain of adenylyl cyclase, which has significant homology to other previously known types of adenylyl cyclase). One positive clone, of 5.4 kb was obtd. Positive colonies were subcloned into pUC18 and further subcloned and sequenced bidirectionally. The 5.4 kb clone was used to rescreen the library and on averlapping clone contg. the 5' end of the gene was isolated. Together the two clones cover the complete canine cardiac adenylyl cyclase gene. The gene is suspected of being involved in the regulation of cardiac function and it is thought that decreased activity of adenylyl cyclase in the heart may be a major factor in the development of heart failure. Thus the adenylyl
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Fig 2; 34pp;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         WPI; 1993-168873/21

Separation and purification of the recombinant enzyme is much easier compared with wild type enzymes and the recombinant enzyme is more stable than the wild type enzyme which allows easier screening of compounds that stimulate and inhibit Adenylyl cyclase activity. The recombinant adenylyl cyclase comprises a chimera of adenylyl cyclase (1 and C_2 domains linked covalently. The domains may be linked by a linker peptide. The recombinant adenylyl cyclase is useful for screening inhibitors and stimulators of adenylyl cyclase activity. Inhibitors of the enzyme are useful for treating cholera, pitultary tumors, heart failure, ischaemia, endocrine disorders and cell necrosis. Stimulators of adenylyl cyclase and ensyme and ensyme are useful for cyclase are useful for treating pseudohypoparathyroidism and other
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           986

is useful for examining the ischaemic condition (e.g. compressive ischaemia, occlusive ischaemia or vasospastic ischaemia) by measuring expression levels of particular genes (AB199202 to AB19912, encoding the protein sequences in ABB57020 to ABB5734) or by determining the expression profile of a gene group comprising these genes. The expression levels or expression profiles produced by these genes are used as an indicator when screening for ischaemic condition-improving drugs or therapeutics for ischaemic diseases. AB199913 and AB199914 represent PCR primers for a mouse ischaemic condition related sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1026

This sequence encodes the human type V adenylyl cyclase (hAC5) of the invention. hAC5 has a similar putative structure to other adenylyl cyclase isoforms but, like type VI. is distinguishable in that it has a larger N-terminus and a relatively shorter C-terminus as it lacks the cobregation. The hAC5 polypeptides are useful in assays that screen for potential therapeutic agents, which modulate hAC5 activity. These colypeptides are also useful in assays for the diagnosis of diseases and discorders. Agonists of hAC5 are useful control agents in such assays, and they may have useful effects in vivo for treating disease. Antibodies acting as (ant)agonists have diagnostic and therapeutic effects, and are useful in immunoassays for hAC5. (Ant)agonists are particularly useful in treating diseases caused by abnormal hAC5 activity (e.g. in the heart and brain), and in diseases, which are alleviated by modulating hAC5 activity. The oligonucleotides are useful in methods that inhibit or requiate hAC5 enables the development of tissue-specific and selective consistent human diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1046 Argcgcrcarcgccgrggrgcrggccgrccaggrggrgggccrgcrgcrgccgcagccac 1105

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            GCAGCCCCTCTGCGGGCCTCTGGTGCTTCTTTGTATACATCGCATACACGCTCC 124
                                                                                                                                                                                                                                                                                                                                                                                                                                                  A cDNA library was prepd. in lambda g110 phage. A 970 bp Aat HincII fragment from type I adenylyl cyclase cDNA was used as probe. The clones isolated were used to obtain CDNA encoding CACV. This probe may also be used to screen a human cardiac CDNA library to obtain the CDNA encoding human CACV. CACV, its analogues and antibodies are useful in therapy or diagnostic assays, e.g. in modifying and determining cardiac function. A decrease in CACV content of the cDNA contributes to impaired cAMP prodn. and in heart failure. The CACV can also be used to screen for cpds. which stimulate or inhibit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            64

                                                               A recombinant Adenylyl cyclase is described which lacks membrane bound domains. Separation and purification of the recombinant enzyme is much easier compared with wild type enzymes and the recombinant enzyme is more stable than the wild type enzyme which

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 allows easier screening of compounds that stimulate and inhibit Adenylyl cyclase activity. The recombinant adenylyl cyclase comprises a chimera of adenylyl cyclase (2.1 and (2.2 domains linked covalently.) The domains may be linked by a linker peptide. The recombinant adenylyl cyclase is useful for screening inhibitors and stimulators of adenylyl cyclase activity. Inhibitors of the enzyme are useful for treating cholera, pitultary tumors, heart fallure, ischaemia, endocrine disorders and cell necrosis. Stimulators of adenyly cyclase are useful for cholera and cell necrosis. Stimulators of adenyly cyclase are useful for treating pseudohypoparathyroidism and other
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    840
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               541
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           960

The invention relates to human adenylyl and guanylyl cyclases (ADGUC)

preferably ADGUC1-ADGUC5 and nucleic acid molecules encoding such
polypeptides. ADGUC sequences are useful in the diagnosis, prevention
and treatment of cardiovascular disorders (e.g. angina pectoris,
myocardial infarction, ischaemic heart disease, hypertension and
atherosclerosis), vision disorders (e.g. extracoonjuctivitis sicca,
keratitis, iritis, cataract), neurological disorders (e.g. epilepsy,
Alzheimer's disease, plck's disease, Huntington's disease, dementia,
parkinson's disease, creutzfeldt-Jakob disease, stroke, schizophrenia,
mental disorders including mood an anxiety and prion diseases including
kuru), reproductive disorders (e.g. infertility, endometriosis,
clupylence, uterine fibroid and gynaecomastiah), smooth muscale disorders
clupotroce, uterine fibroid and gynaecomastiah), smooth muscale disorders
clupotroce, uterine fibroid and gynaecomastiah) smooth muscale disorders
cor transgenic animals to model human diseases. They are useful in
cor transgenic animals to model human diseases. They are useful in
cor detecting differences in the chromosomal location due to
cor detecting differences in the chromosomal location inverse in the chromosomal location inverse in the correction due to
correction inversion, etc. among normal, carrier or affected
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             .ndividuals. ADGUC polypeptides are useful in a number of drug screening

```
The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention
                                                                                                                                                                                                         GCCGTGCCATCGATGCCCGCAGCATTGATCAGCTGCGGAAGGACCATGTGCGCCGGTTTT 1309
